

Services

One of the strengths of APD Ltd is our ability to provide a complete turnkey solution for our customers, both within the UK and internationally.

From start to finish of any job customers benefit from our commitment to technical expertise, a problem solving approach, attention to detail and a focus on delivering excellent customer service.

Whether it is a simple control panel or electrical installation through to a fully integrated PLC/SCADA/MES system - from the initial contact through to conclusion - every aspect of your project is entered and monitored on our own custom written management system called 'Ornavi'. This provides us with full traceability of who, when, what and where, and it allows us to allocate resources in the most efficient and beneficial way.

From Ornavi we can produce quotations, order parts, monitor labour costs, store documentation, give real time progress reports and even give our customers the ability to log-in securely and check our progress. This forms a key function in allowing APD to achieve ISO9001 quality status. It also allows us to monitor costs on a project by project basis ensuring that we continue to produce competitively priced solutions for our customers.
