

## Engineer Secondment

If you would like to benefit from a highly trained and experienced engineer on-site for a set period of time, without the hassle and complications of creating an employed post, then you may want to consider engineer secondment.

Given the correct terms, we can release one of our engineers on secondment to work temporarily at a customers' premises. With this approach our highly trained and experienced engineers and technicians effectively integrate themselves into the customer's engineering department.

Engineer secondment is successful due to its flexible, time-saving, cost efficient nature. One of our engineers at APD Ltd will draw on their broad set of experiences, focusing on industry best practices.

Most often engineer secondment takes place at the start of a major project, providing continuous, on-site input and support, but it could take place at most stages of project development.
